

More than 50,000 Zentyal installations in small and medium businesses worldwide confirm the need for all-in-one IT solutions that are easy to use and affordable.

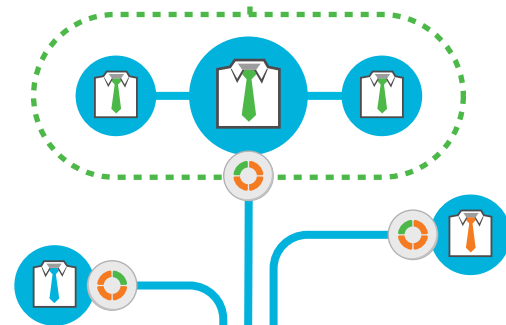

Zentyal makes it possible to manage all the small business IT infrastructure, **from the server to the cloud**, through an easy-to-use graphical interface. Centralized management of users and groups, independently of the network services required or the location of the different offices **offer significant savings in time and help to avoid configuration errors**, guaranteeing maximum system uptime.

Zentyal solutions have been specifically designed to respond to the **needs of small and medium businesses and their local IT providers**. In this type of environments, where there is a growing demand for IT, but the budgets are tight, Zentyal-based solutions are very competitive because they offer all the **necessary functionality** while requiring **little time to deploy and maintain**.

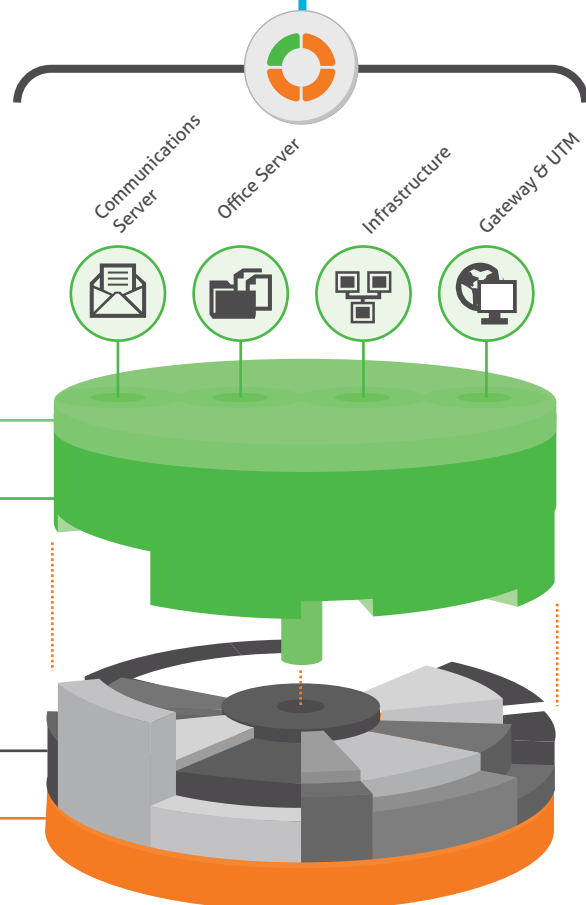

Why to continue paying high software license fees? Zentyal-based solutions are available as a service, for an **affordable monthly fee** including unlimited technical support as well as **all the software and security updates**.
